

ROADDO PHP ASSESSMENT

QUERY BUILDER

Write a simple query builder with Core PHP to perform CRUD operations.

WHAT TO EXPECT

- Is built with modern OOP design
- Uses PHP Data Objects for DB Connection
- For Read Operation just basic WHERE, LIMIT, ORDER clauses should do.
- Uses MariaDB/MySQL
- It does not create new global variables
- A script that implements your query builder

WHAT NOT TO EXPECT

- Use of Frameworks
- Use of libraries

Our Hope is that you enjoy this simple assessment and have fun with it.

Please use git and commit regularly, it shows us how you work.
